EDUCATION

Indian Institute of Information Technology, Bhagalpur <i>B.Tech in Computer Science Engineering</i>	CGPA: 7.22 2023 – 2027
Ben Hur Public School <i>Senior Secondary (Class XII)</i>	91% 2022
Ben Hur Public School <i>Secondary (Class X)</i>	92% 2020

TECHNICAL SKILLS

Languages: C++, JavaScript, SQL
Core Computer Science: Data Structures & Algorithms, System Design, Object-Oriented Programming (OOP), Operating Systems, Database Management Systems (DBMS), Computer Networks
Frontend: React.js, React Native, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, Microservices, Webhooks, Event-Driven Architecture, Asynchronous Processing, WebSockets, JWT Authentication, Role-Based Access Control (RBAC)
Databases & Infrastructure: MongoDB, MySQL, Redis, Caching, Docker, AWS S3
Software Engineering: Idempotency, Retry Mechanisms, Rate Limiting, Error Handling, Input Validation, API Design, Unit Testing, CI/CD
Tools & Services: Git, GitHub, Postman, Cloudinary, n8n,

INTERNSHIP

SalesifyMe <i>AI Automation Intern</i>
- Constructed workflow automation solutions using n8n, integrating REST APIs and JSON-based data exchange to automate business processes and streamline cross-platform workflows. - Engineered 4 reliable automation pipelines by integrating Gemini and OpenAI APIs, enabling intelligent data processing and autonomous task execution across 3+ integrated platforms. - Orchestrated and maintained data processing workflows with input validation, data transformation, centralized error handling, and structured execution logic to improve workflow reliability. - Architected and maintained scalable backend automation processes, orchestrating asynchronous workflows, REST API integrations, and database operations. - Optimized automation workflows by resolving execution bottlenecks, reducing data processing latency by 30% and improving overall system efficiency.

PROJECTS

Multi-Tenant Workspace Management System <i>SaaS collaboration platform with multi-tenancy, RBAC, and secure workspace management</i>	2026 GitHub Live Demo
- Built and deployed a multi-tenant SaaS platform using React, Node.js, Express.js, and MongoDB Atlas for managing workspaces, projects, tasks, and team collaboration. - Implemented secure authentication and authorization using JWT, httpOnly cookies, Role-Based Access Control (RBAC), and OTP-based password reset with Nodemailer. - Architected scalable RESTful APIs using MVC architecture with middleware-based authorization, input validation, centralized error handling, pagination, and modular service-layer separation. - Programmed collaboration features including workspace invitations, task assignment, threaded comments, and file uploads using Cloudinary. - Deployed the frontend on Vercel and backend on Render, integrated MongoDB Atlas, and configured production environment variables, CORS, and secure cross-origin authentication.	
Banking Management System <i>Transactional banking backend with secure APIs and atomic database operations</i>	2026 GitHub
- Engineered a backend banking application using Node.js, Express.js, and MongoDB supporting user authentication, account management, balance management, and inter-account fund transfers. - Implemented strict ACID-compliant MongoDB transactions to guarantee atomicity, preventing race conditions and ensuring 100% data consistency during concurrent fund transfers. - ormulated secure RESTful APIs with JWT authentication, protected routes, input validation, and centralized error handling. - Optimized database schema and query patterns for efficient account management, transaction processing, and balance retrieval. - Structured the backend using separate routes, controllers, services, and database layers, improving maintainability, scalability, and testability.	

ACHIEVEMENTS

- Solved **500+** Data Structures and Algorithms problems across LeetCode, GeeksforGeeks, and other coding platforms.
- Achieved a **3-Star** rating on CodeChef through consistent participation in rated contests.
